### Displays and votes:

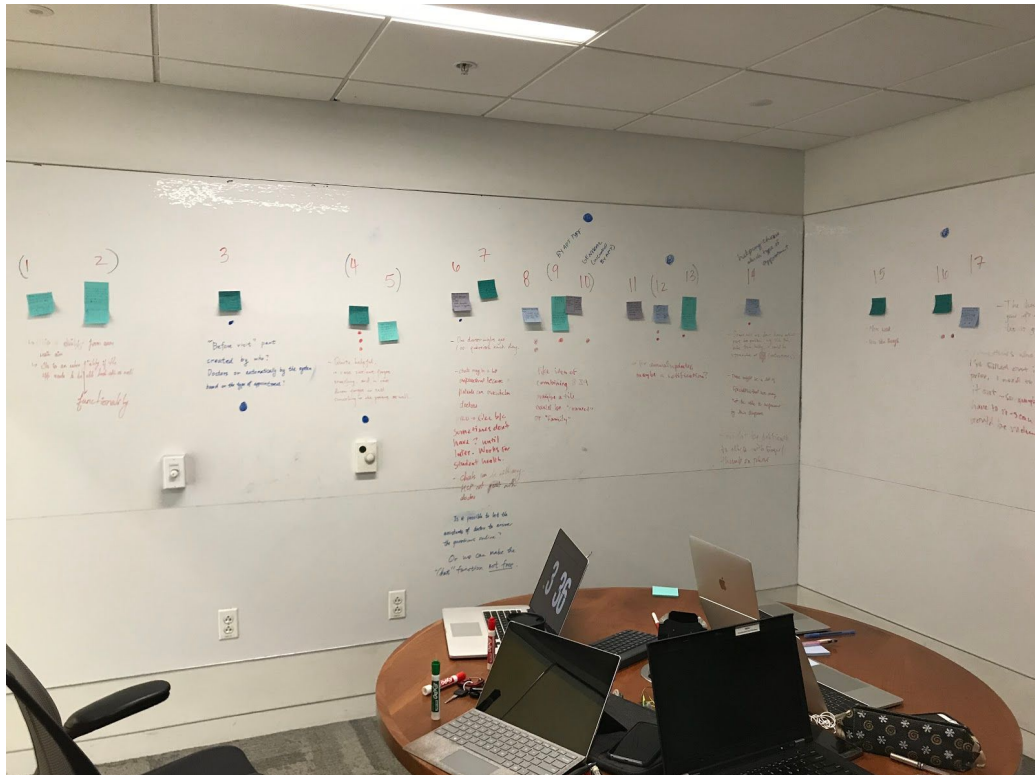

After each of our 3 votes

## Critique:

1. Planning an appointment searching by a time in the comment
  - a. Extra functionality
  - b. May not be beneficial for our app
2. Planning appointment by searching by doctor
  - a. Extra functionality
  - b. May not be beneficial for our app
3. Before visit notification
  - a. See something you need to do before the visit
4. Post visit notification
  - a. Helpful, in case patient forgets something and in case doctor forgets to tell something to the patient as well
5. Exactly the same as 4
6. Chats
  - a.
7. Chats
  - a. Dislikes:
    - because doctors can get overwhelmed
  - b. Like:
    - Because sometimes don't have questions right away
  - c. Screens by nurses here
  - d. Maybe pharmacists
  - e. Lots of discussion here
8. Share information to the family members
  - a. Maybe merge it with 9
  - b. Can directly show the doctor when he asks your parents' information
9. Metro style tiled display of categories with images to make it more visual
10. Information categorization
  - a. Useful for the doctors
11. Information storage
  - a. Not a problem with UX
12. Design of app
  - a. Basic
  - b. Medical
    - i. Maybe doctor be able to see both
13. App profile
  - a. Basic medical
14. Visual Category choose guide
  - a. Cannot identify the body part with the problem sometimes
  - b. Lots of other specialities that can't be specified from the diagram
15. Be able to enter information on the phone and the website
  - a. Like because it is nicer to input information
  - b. Dislike because more work
16. Checking in with the QR code
17. Quickly share information online
  - a. Can choose to share or not share information
  - b. Shouldn't need to choose that

## Straw and decider votes:

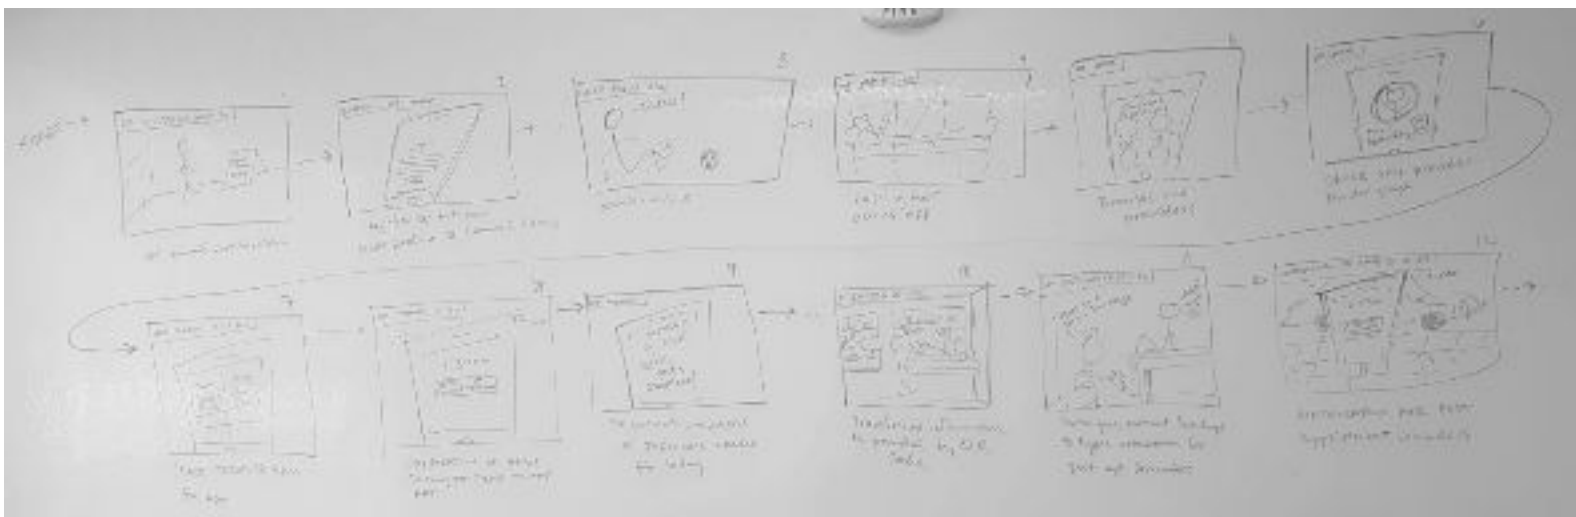

[See the deciders notes here](#)

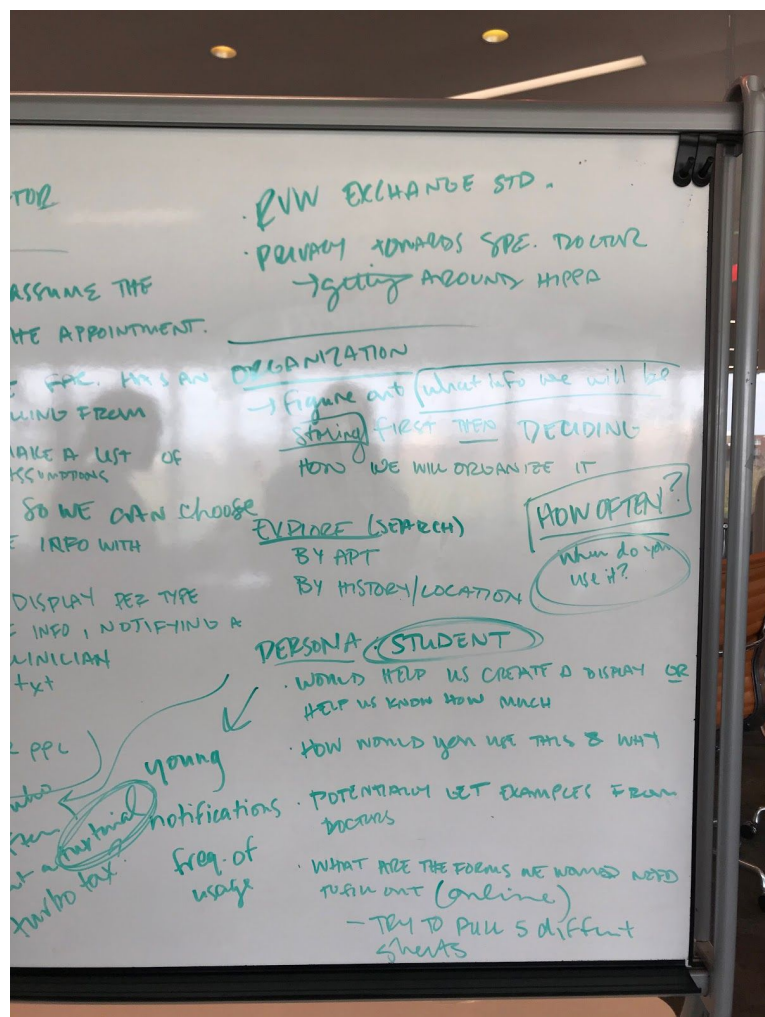

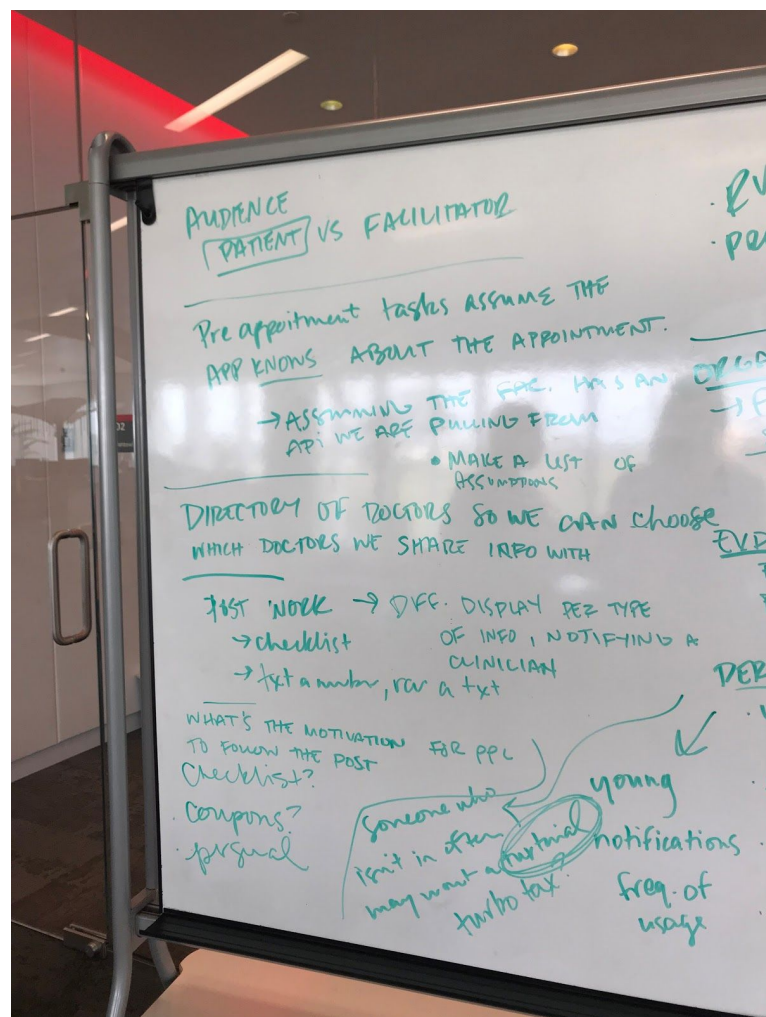

## Merge or not:

After our big dot votes, we decided, each was critical for the app to be complete. So we are merging the ideas.

## Storyboard:

## Deciders notes (from allscript meeting):

### Audience

Since our app is beneficial to both the patients and the providers, allscripts asked which we will be focusing on. We decided to focus on the patients since it is easier to ask expert patients.

### Pre appointment tasks

In order for our app to display pre appointment tasks, we assume that the app knows about the appointment and that the providers has an api our app can pull from.

### Post appointment tasks

Checklist? Notifications?

### Organization tiles

Allscripts said first we should decide what information we are collecting before deciding on the organization of it

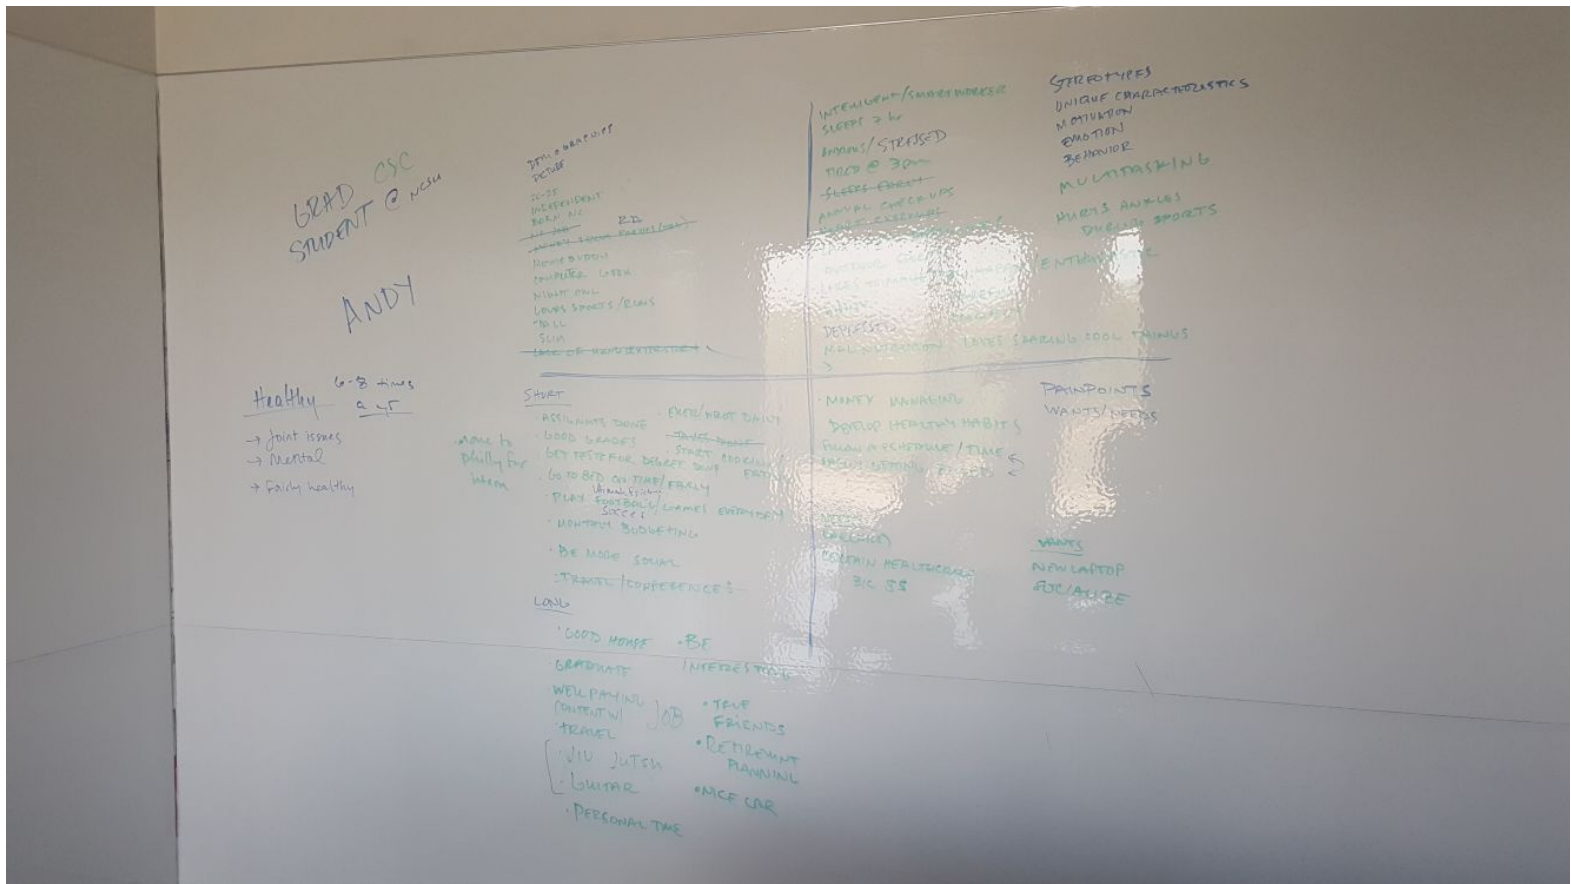

### Ideas from them

- Review the exchange standard
- Develop a person now and create the app for one persona; think about how often they would use the app and what they would use it for.
- Directory of doctors so we can choose which doctors we share information with
